

ANGLICAN MISSIONS

LENTEN APPEAL 2023

BUY A BRICK!

Compressed earth bricks are a cheap and sustainable method to build climate resistant houses. It takes about 8000 bricks to build one two bedroom house.

It averages about \$2NZD to produce one brick, which means your donation will literally be building build cyclone resistant houses for climate resilient communities!

Organise your community or parish to buy a brick (or multiple)! You could host a fundraiser, movie night, raffle or bake sale. Whatever it is, you'll be practically helping the people of Fiji to become even more resilient in the face of growing climate instability.

Buy a brick, build a future.
